

Coping Skill Idea

Deep Belly Breathing

Remind your child that this coping skill can be used at any time, when she wants to calm down and refocus her mind and body. Ask your child when she thinks that this may be helpful for her; perhaps it is before a test or on the way to soccer practice.

We breathe all day long and almost never think about it! Taking deep breaths can improve your child's ability to focus and better handle his emotions by slowing down his heart rate, allowing his muscles to relax and calming his mind and body.

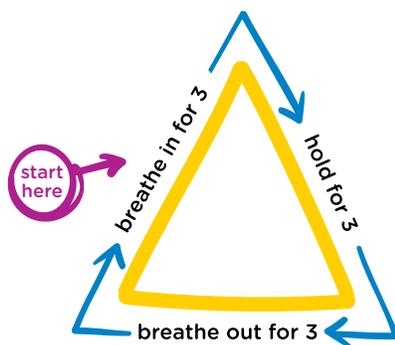

How to practice deep breathing

1. Put your hand on your stomach so that you can feel your stomach filling with air.
2. Inhale through your nose.
3. Feel your belly fill with air and hold it for a few seconds.
4. Exhale through your mouth.
5. Repeat several times.

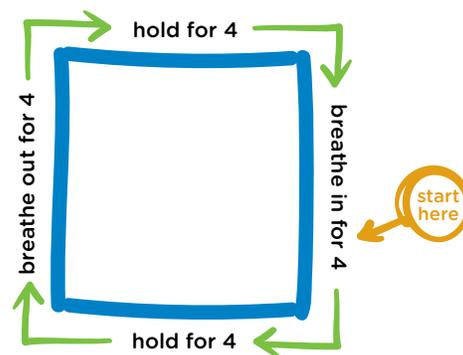

Make deep breathing fun

- ✓ Think of your belly as a balloon. As you breathe in, let the balloon fill with air, then breathe out and let the balloon deflate.
- ✓ Practice taking deep breaths by inhaling and then exhaling as you blow bubbles, or blow on feathers, dandelions or a pinwheel.
- ✓ Lie down and place a small object on your stomach so that you can see the object rising and falling with each breath.
- ✓ Inhale as if you are smelling a flower, and exhale as if you are blowing out birthday candles.
- ✓ You can trace shapes to help you focus on your breathing. Use the triangle and square shapes to practice.

Triangle breathing

- Start at the bottom left of the triangle.
- Breathe in for 3 counts as you trace the first side of the triangle.
- Hold your breath for 3 counts as you trace the second side of the triangle.
- Breathe out for 3 counts as you trace the final side of the triangle.
- You have just completed 1 deep breath!

Square breathing

- Start at the bottom right of the square. Breathe in for 4 counts as you trace the first side of the square.
- Hold your breath for 4 counts as you trace the second side of the square.
- Breathe out for 4 counts as you trace the third side of the square.
- Hold your breath for 4 counts as you trace the final side of the square.
- You just completed 1 deep breath!

Helpful hint: It's difficult to learn things when we are anxious, angry or too distracted, so it is important to try new coping skills during a time when your child is calm instead of during a time of stress. A skill that works one day might not work the next, so encourage your child to try different strategies to help build her coping skills toolbox. Keep in mind that your child is watching and listening to you, so it's important that you practice with your child and role model using healthy coping skills to manage your own stress and emotions.
